COMPLAINT: SOLAR PANEL INOP

CAUSE: No voltage from the cable entry cap to the solar controller

CORRECTION: During the sfd found there was no voltage coming from the solar panel to the controller  
 Removed controller from the wall disconnected the wires from the controller tested for voltage reading was .03

Set a ladder up got on the roof and and disconnected the solar panel from the roof entry cap and tested voltage reading was 22.76

Removed the roof entry cap and tested continuity at the wire nuts to the controll panel and both were good Found a locking nut on the entry cap quick disconnect was broken and allowing the negative side to freely move

Recommend the replacement for the roof mount entry cap and replacement of the wiring from the roof entry cap to the controller

Requesting diag time and additional 2 hours

Reinstalled the roof entry cap due to weather

Removed entry cap from the roof

Scrapped off all sealant

Connected the new entry cap

Tested out put from the solar panels to the control box

Found the out out was 23.37

Reconnected the control board to the solar and found output to the the battery was now 13.4

Applied putty tape to the base of the entry cap

Secured the wires back into the roof

Screwed the entry down to the roof

Resealed the entry cap with dicor

Reinstalled the control board to the wall and attached the trim screw cover

Work completed
