Job #1 - Warranty

COMPLAINT: A/C KEEPS FREEZING UP. CUSTOMER IS RUNNING FAN ON HIGH WHEN THIS HAPPENS. IT WILL COOL FOR A SHORT TIME, BUT THEN IT FREEZES UP AND STOPS COOLING.

CAUSE: Ac freezing up

CORRECTION: Brought unit in. Plugged into shore power and turned on ac to high fan and cool. Placed thermometer in to read temp. Ac reached close to 60 degrees Fahrenheit. Let run to see if ac freezes up. Picture taken of outside temp. Ac does freeze up. Picture taken. Warranty sheet filled out for replacement ac. Received new ac. Went inside and removed cover on ceiling. Removed screws and dismantled control box. Removed 120v wires from control box. Unplugged wires harness from ac. Removed lag bolts holding ac in. Placed new ac on lift and went to roof. Removed old ac and put new ac in place. Got down from lift and went inside unit. Placed plenum on and hand tightened ac lag bolts to ac. Used gun to tighten down more. Torqued lag bolts to spec between 40-50inlbs. Grabbed new control box and wired in 120v to box. Mounted control box. Placed ceiling cover in place and secured with screws. Placed screw covers on, put vent cover in place, and ceiling controls in place. Plugged into shore power and ran ac to make sure it cools properly by placing thermometer in ac. Ac cools and gets to 60 degrees Fahrenheit. New ac is secure and works properly.
