Job #1 - Warranty

COMPLAINT: CUSTOMER STATES REFER IS NOT COOLING PROPERLY (FAN?) SHOWS ERROR CODE / FREEZER IS OPERATING NORMALLY

CAUSE: Customer reports error on the refrigerator side and is not cooling properly

CORRECTION: In a part plugged into shore power went to the refrigerator to look for the error code being displayed no error code found freezer temperature set at 04 refrigerator temperature set at 34. No error code soon after approximately 30 minutes of being unplugged into shore power, the refrigerator already felt as if it was cooling and the freezer was also cooling well allowing to set plugged in and check the refrigerator periodically for proper operation
Let the unit setting during the entire day, put water in the refrigerator compartment, and the freezer compartment and cups when I went back to check the refrigerator it did have FFER code that code is directly related to the fan. The water in the freezer compartment, didnt even get below 40.
Did remove all the shelving out of the freezer and pulled the fan out disconnected it brought it in the shop tried to test the fan with an outside 12 V source to see if the fan would come on the fan never came on
Also did a hard reset on the refrigerator by removing all power to the refrigerator for 15 minutes restored power to the refrigerator plug the fan back into the refrigerator and it did not come on
Recommendation replacement of the fan photo attached of the fan and the refrigerator label
2.00HRS
