CAUSE: water leak when using hot water.

CORRECTION: pulled unit in shop. hooked up to shore power. turned on water heater. added some water to fresh tank. ***water pump was still in bypass mode.*** after letting water heater warm up i turned the water pump on to pressurize system. removed panel under sink. noticed water on and around both hot and cold fittings going into the back of the water heater. tightened up both fittings. removed panel under shower to make sure nothing was leaking. let system heat up again and pressurize. no more leaks present. cleaned up mess.parked unit.
