Job #1 - Warranty

COMPLAINT: CUSTOMER GOT UNIT HOME FROM SERVICE AND FOUND THAT THE AIR
CONDITIONER IS NOT PUTTING OUT VERY COLD AIR AND IT IS SHORT CYCLING.

CAUSE: The air conditioner is not working right.

CORRECTION: I plugged the camper in. I turned on the air conditioner and it turned on. It worked fine for
about 10 minutes. The compressor would turn off and not come back on. The temperature on the discharge
would change from 62 to 71. The compressor would not come back on. I installed a test box on the air
conditioner and bypassed the control board. The roof top air conditioner unit works as it should with the
bypass test box. This unit needs a control board with thermostat.

I removed the old control board and installed a new one. I let the unit run for 3 hours. It is working as it
should.
