WO # Job # Description JOB INFORMATION

77998 2 INSTALL THE WIRING TO THE STAY JACKS
Install wiring for stay jacks
Had to drill hole i. Underbelly at front and back jacks to hook
wires up. Ran wire from back to the front of the camper up in the
Underbelly for the the jack switches that i have to mount in the
front compartment. Then i had to run a power wire with a inline
fuse to the battery to get power to the switches that i have to
come up from the Underbelly between the wall for the switches
mounted in front compartment. Got the switches and had to mount
them a plastic case. Thaat i had to cut the holes in it for the
switches, because they were deeper than the wall thickness. Ran
the power wire with a fuse link in it from the battery and ran a
designated ground wire from the switches to the battery that i
attached to the main ground wire to make sure they connect it
also. Tested both stabilizer jacks and they work properly. Its
good to go

77998 1 NO TANKS ARE WORKING ON THE PANEL
Tank levels not showing up on control panel
Took panel down and checked the wires that are going to the back
of the tank level board all good there. So i took the underbelly
down and checked the ground at the fresh tank and i wasn't
getting anything there So i put a jumper wire from the ground
wire to the frame and the tank levels worked as they should. So i
made a ground wire and conected it to the ground wire and ran it
to the frame and everything works properly now. Put the

77998 3 WHEN THE PUMP IS ON THE LIGHTS FLICKER
 Lights flickering when water pump is running
 So after inspection of the water pump when running the lights
 flicker. I ran a jumper wire off the ground wire to the ground
 bus bar that fixed the problem. So i ran a new wire from the
 ground off the water pump to the ground bus bar and water pump
 works properly and lights dont flicker. Good to go
